Summary

Third-year Computer Science student at UNB (Dean's List, 4.0 GPA) building production-grade TypeScript systems across AWS Lambda, SQS, and DynamoDB, with hands-on MCP server development, agentic tooling integrations, and full-stack React applications. Also experienced in Java and Spring Boot microservices with PostgreSQL, Flyway migrations, and Testcontainers-backed integration testing.

Education

University of New Brunswick

Bachelor of Computer Science

September 2024 - May 2028

Fredericton, NB

– CGPA: 3.9 / 4.3

– Additional: Diploma in Technology Management and Entrepreneurship, Diploma in Geomatics (Mapping and GIS)

Technical Skills

Languages: JavaScript, TypeScript, Java, Python, C, SQL

Frontend: React, Next.js, Astro, D3.js, Tailwind CSS

Backend: Node.js, Express, Spring Boot, REST APIs, JWT authentication, Zod

Databases: PostgreSQL, Supabase, MongoDB, DynamoDB, MySQL

Testing: Vitest, Jest, Supertest, unit testing, integration testing, test automation

Cloud and Tools: AWS (Lambda, API Gateway, SQS, Parameter Store, S3, CloudWatch, KMS), Model Context Protocol (MCP), Docker, GitHub Actions, Linux, Agile/Scrum, Vercel, Render, Git, npm workspaces

Projects

PRPilot | *TypeScript, AWS Lambda, API Gateway, SQS, DynamoDB, Parameter Store, CloudWatch, KMS, Zod, Vitest*

- Self-hostable GitHub App that reviews pull requests deterministically on AWS, targeting sub-60s p95 completion and a \$5/month cost ceiling, without AI or external data exposure.
- Built the webhook security foundation around GitHub signature verification, selected-repository scope, normalized payloads, delivery dedupe, and safe SQS handoff with a strict fail-closed posture.
- Designed the fast-lane rule engine with DynamoDB short-lived records and runtime policy controls, backed by Vitest tests across signature verification, dedupe, and rerun throttling.

Auctus | *Next.js, TypeScript, React, Tailwind CSS, Supabase, MCP, Vitest* 

- Built an MCP server exposing the Auctus ETL pipeline as agentic tools, enabling AI assistants to trigger scrape runs, inspect scrape metadata, and query ingested Canadian funding records directly against the Supabase backend.
- Shipped a Canadian funding discovery platform with a team of three to Fredericton Ideation Boost Camp (January 2026), covering role-specific pages, Supabase auth, profile onboarding, match scoring, and a community forum.
- Built an automated scraper ingesting official Canadian funding sources and a dashboard showing recommended funding, upcoming deadlines, and forum activity.

Queue | *Java, Spring Boot, gRPC, PostgreSQL, Docker, Testcontainers, JWT, Flyway, RabbitMQ, Maven* 

- Building a multi-service Java/Spring Boot event platform with separate event, identity, gateway, and registration services, each maintaining its own Flyway-managed PostgreSQL schema and REST/gRPC interface.
- Implemented JWT auth, role-based gateway routing, capacity-safe registrations with outbox patterns, Docker Compose infrastructure, and Testcontainers-backed integration tests across all services.

D3Careers | *React, Vite, D3.js, Node.js, Express, MongoDB, JWT, Cal.com, Jest, Supertest* 

- Full-stack career exploration app where students browse a D3 Sankey diagram of real alumni career movement, filter by major and background, and schedule mentor chats without a login for public pages.
- Built a React and Express stack with MongoDB, JWT role-based auth, protected dashboards, alumni profile completion flows, and Cal.com booking integration with a backend webhook route.
- Tested Sankey shape building, route behavior, and booking signature helpers with Jest and Supertest.

Fluo | *Next.js, React 19, TypeScript, Tailwind CSS, React Flow, Solidity, Hardhat* 

- Built a defence procurement workflow control and audit logging proof of concept at the Dual Use Hackathon 2026, modelling document routing, vendor risk evaluation, and risky workflow blocking for a Canadian defence context.
- Deployed a Solidity smart contract to a local Hardhat chain recording procurement events with payload hashes, giving the UI a tamper-evident audit trail backed by a JSON ledger cache.

Developer Tools

Likit | *Claude Code/Codex spec kit, npm package*

- Lightweight agentic spec kit for students using gated builds, progress tracking, proof-based checkpoints, and senior engineer-style critique without ever writing code for the student.
- Full instruction set fits under 10% of context window, keeping it efficient and enabling at least 2–3 projects per week on the Claude Pro plan without losing session progress.

Work Experience

Freelance Web Developer | **BSI Solutionz**

March 2026

Client website project

Fredericton, NB

- Designed and developed a public website for a Delhi-based hoist and crane dealer using Astro, React, and Tailwind CSS; integrated Resend API for enquiry delivery and Zod with React Hook Form for input validation.

Youth Care Worker | **Fredericton Regional Youth Services**

January 2025 - Present

Residential youth support

Fredericton, NB

- Support adolescent residents facing social, emotional, behavioural, or legal challenges by maintaining safe routines, documenting shift notes, and communicating clearly during staff handoffs.

Volunteer Experience

Upcoming Volunteer | **Atlantic AI Summit 2026**

May 21, 2026 - June 6, 2026

Event operations support

Fredericton, NB

- Supporting summit operations through registration help, attendee guidance, session support for an AI conference.

Head Coach | **Fredericton District Soccer Association**

May 2025 - August 2025

Recreational youth boys program

Fredericton, NB

- Coached youth players through practices and game-day support, helping them build confidence, teamwork, basic tactics, and a positive learning environment.

Certifications

IBM JavaScript Programming with React, Node and MongoDB Specialization

January 2026

IBM Java Developer Professional Certificate

January 2026

IBM Introduction to DevOps

October 2025

Awards

Dean's List, University of New Brunswick

2025 - 2026

- Assessment year GPA: 4.0

UNB Scholarship for Academic Excellence

2024 - 2025
